To Whom It May Concern:

We are happy to recommend Mr. C. J. Ezell for both his service and his knowledge of our computer hardware, software and network solutions for our dental office. Our office has used SoftDent management software since 1992, and we have been very satisfied with its capabilities for providing all the information needed for our patients' accounts and records. We have a busy practice with two doctors and four hygienists and three receptionists, and we rely on our computers for our patient information.

We have used several different companies over the years for hardware installation and service, and we have been very happy with C.J., both personally and professionally. He has become a good friend to our office. The installation and upgrade of our hardware has always been handled in a proficient manner, with as little downtime as possible. He is always available when we need help, and we are confident that he will take excellent care of us in the future. He is simply that kind of guy. We were thrilled when he became the Network Solutions Provider for Kodak, who owns and supports our software. We think we have it made now...with the best software for our present and future needs and the best person/company to help us continue to improve our computer system. We hope to computerize our patient chart information, and we are comfortable with the fact that he will help us do everything as smoothly as possible. Also, his employees have also always been pleasant and capable in their work for us. We highly recommend his company to identify, service and maintain your computer needs. Please feel free to call if you need any additional information.

Sincerely,

Richard O. Noblet, D.D.S.
